

Drafting an emerging picture

Name: Sangeeta Sharma

Community (UN SD goal): SDG #1 No poverty, #4 Quality Education and #13 Climate Action

Date: 05/12/2021

Instructions:

Using your researched information fill out the flowing comparing the current state of the art with what you think new (software) innovations could bring to the community

Covering the orientations	
Compare the left-hand column of the document "Technology configuration inventory" table with the right-hand column of the document "Community characteristics & orientation" table. What do you notice about the match (or mismatch) between your dominant community orientations and the current configuration of tools?	
How well does the technology inventory cover the orientations? What themes emerged from both the community orientations and the technology configuration from your colleagues' notes	Technology configuration inventory covers almost in the present scenario for the community orientation. As of research, many applications are built using different mechanism, but they are not user friendly. This application helps the community to make the usage of graphical features.
<input checked="" type="checkbox"/> Are you almost there? <input type="checkbox"/> Are there big gaps?	Yes, almost there.
What is the range of skills? If their interests and/or skills are diverse, could it cause conflict or distraction?	Time management and organization, as the yield production depends on season.
Achieving integration	
Look at all the pieces of your configuration	
What level of integration and interoperability has been achieved?	Matlab software will be required and there will be need of dataset which can be access through internet.
Where are there big gaps	No big gaps found as of now.
Balancing the polarities (Current state)	
How is the configuration balanced with respect to each polarity?	

[illegible]
